

AI Workflow Audit — FL-01

Deliverable: FL-01

FlyRank AI Fluency Track • Baseline Workflow Analysis & Delegation Strategy

Date: August 2026 • Status: Approved Baseline

AI FLUENCY PRINCIPLES & GOVERNANCE NOTE

Artificial Intelligence is utilized as an intelligent multiplier and iterative collaborator across technical scaffolding, boilerplate generation, literature synthesis, and administrative triage. However, core engineering architecture, creative taste, nuanced professional communications, and graded academic assessments strictly remain under authoritative human ownership, manual verification, and critical oversight.

Recurring Task Classification Matrix

#	RECURRING TASK	CLASSIFICATION	RATIONALE
01	Academic Coursework & Graded Exams	Just me	Guarantees academic integrity and verifies unassisted mastery of underlying theoretical concepts.
02	Final UI/UX Direction & Portfolio Curation	Just me	Preserves authentic personal design taste, brand identity, and creative artistic standards.
03	Live Technical Interviews & Client Negotiations	Just me	Demands spontaneous real-time problem-solving, emotional intelligence, and authentic trust-building.
04	CRUST Platform Feature Scaffolding	Collaborate with AI	Speeds up full-stack CRUD, state management patterns, and interactive pizza builder mechanics.
05	EaseMotion-css Keyframes & CSS Math	Delegate to AI with review	Automates repetitive cubic-bezier timing calculations and multi-browser vendor prefixes with review.
06	UI/UX Portfolio Component Edge-Cases	Collaborate with AI	Brainstorms accessibility states, responsive layout permutations, and dark-mode color balance.
07	Internship Application Materials Alignment	Delegate to AI with review	Tailors project descriptions to job requirements, audited manually for truthful representation.
08	Recruiter Outreach & InMail Drafting	Delegate to AI with review	Generates contextual conversation starters, edited to retain a genuine individual voice.
09	International Client Prospecting & Pitches	Collaborate with AI	Structures freelance proposal scopes and technical deliverables based on client requirements.
10	Research Paper & Conference Evaluation	Collaborate with AI	Synthesizes dense academic literature, methodology trade-offs, and track relevance.
11	Programming Concept & Algorithm Study	Collaborate with AI	Serves as an interactive Socratic sounding board for data structures and system design fundamentals.
12	Git Commit Messages & PR Summaries	Delegate to AI with review	Drafts standard conventional commit logs from diffs, reviewed before staging to keep history clean.
13	CI/CD Linting, Typecheck & Test Actions	Fully automate	Executes deterministic static analysis, formatting checks, and test suites via GitHub Actions.
14	Application & Deadline Calendar Sync	Fully automate	Logs submission dates, automated status transitions, and reminder triggers via webhooks.

Three FL-02 → FL-04 Target Tasks

Deep-Dive Implementation Targets • Verification Framework & Success Criteria

Action Plan: FL-02 → FL-04

Track: Execution Milestones

01 CRUST Development

FULL-STACK WEB APPLICATION

Specific Task Description:

End-to-end development of the CRUST pizza platform, encompassing dynamic pizza customization state logic, client cart workflows, and the admin catalog management portal.

What “Done Well” Means:

A resilient, type-safe full-stack application featuring fluid real-time pricing recalculations, zero cart synchronization errors, and an administrative panel that enables rapid catalog operations without friction.

Measurable Success Criteria:

- ✓ **Interactive Builder Latency:** Pizza configuration re-renders with <50ms UI update latency across crust, size, and multi-topping state transitions.
- ✓ **Admin Catalog Operations:** Admin dashboard supports instant search/filtering across 15+ menu items with <100ms response time and validated CRUD mutation handling.
- ✓ **Type Safety & Build Integrity:** Zero TypeScript build errors (0 strict-mode warnings) across all shared API schema definitions and UI state hooks.
- ✓ **Core Performance Standards:** Lighthouse Performance score ≥90 on desktop/mobile with First Contentful Paint (FCP) <1.2s.

02 UI/UX Portfolio Improvement

DESIGN ENGINEERING & SHOWCASE

Specific Task Description:

Refactoring and expanding interactive portfolio components, embedding EaseMotion-css animation presets, and refining responsive visual polish across case study presentations.

What “Done Well” Means:

A showcase of production-ready frontend components demonstrating exceptional aesthetic craft, buttery 60 FPS animation performance, strict accessibility compliance, and clean documentation.

Measurable Success Criteria:

- ✓ **Component Showcase Coverage:** Develop and document at least 6 modular, interactive UI components with integrated live previews and copyable code snippets.
- ✓ **Accessibility Standard:** 100% WCAG 2.1 AA compliance verified via automated audit (axe-core/Lighthouse Accessibility ≥95) with zero contrast or keyboard focus traps.
- ✓ **Animation Frame Stability:** Maintain steady 60 FPS across all interactive transitions with Cumulative Layout Shift (CLS) = 0.
- ✓ **Responsive Fidelity:** Flawless rendering validated across standard viewport breakpoints (375px mobile, 768px tablet, 1440px+ desktop).

03 Research & Conference Evaluation

ACADEMIC & INDUSTRY ANALYSIS

Specific Task Description:

Establishing an evaluation framework to track leading computer science conferences (HCI, UI Engineering, Web Systems), filter Call for Papers (CFP) deadlines, and extract actionable research findings.

What “Done Well” Means:

An organized, structured tracking matrix translating academic publications into practical engineering insights while proactively managing submission, workshop, and review timelines with zero missed deadlines.

Measurable Success Criteria:

- ✓ **Conference Pipeline Database:** Catalog and track at least 8 target venues with verified metrics (deadlines, acceptance rates, core topics, publication tiers).
- ✓ **Structured Literature Syntheses:** Complete 10 standardized paper analysis briefs capturing problem statement, technical methodology, and applied takeaways.
- ✓ **Automated Milestone Alerts:** Configure automated notifications for all target deadlines at 30, 14, and 3-day thresholds without manual reminder overhead.
- ✓ **Actionable Insight Synthesis:** Deliver a concise matrix mapping at least 3 research-backed design or architectural patterns directly into active projects.

Audit Execution Guarantee: All delegated & collaborative AI outputs are subject to human inspection and verification.

Track: FL-01 → FL-04
